

In the claims:

Pursuant to 37 C.F.R. §1.121 the following is a complete listing of the claims of the present application:

1.-13. (canceled)

14. (new) A method for producing Recombinant Human Mannan-Binding Protein (rhMBP) comprising steps of:

(a) introducing a pNOW1-hMBP expression vector into a Chinese Hamster Ovary (CHO) cell without dihydrofolate reductase;

(b) successively culturing the cell in a medium containing neomycin and a medium containing methotrexate; and

(c) collecting rhMBP from the medium or the cultured CHO cell possessing resistance to both neomycin and methotrexate,

wherein the expression vector pNOW1-hMBP comprises the plasmid pNOW1 and cDNA that comprises the full-length nucleotide sequence set out in SEQ ID NO:2.

15. (new) The method according to Claim 14, wherein said rhMBP has a peak molecular weight of about 1,000 kDa - about 1,300 kDa as determined by 280 nm absorbance in gel-filtration chromatography.

16. (new) The method according to Claim 14, wherein said rhMBP has a peak molecular weight of about 1,000 kDa - about 1,300 kDa and about 200 kDa - about 400 kDa as determined by 280 nm absorbance in gel-filtration chromatography.

17. (new) The method according to Claim 14, wherein said rhMBP inhibits hemagglutination by Influenza Viruses.
